Location: Pero, Italy

Year: 2002

Client: Comune di Pero

Cost: 750.000 €

Phase: Schematic

Team: SdARCH Trivelli&Associati

The design of the new Pero Metro Station is part of the renovation of the social center of Greppi street. The features of this urban redevelopment concern the center of the square and the bus shelter located at the main entrance of the station. The outdoor area is delineated by a series of double rows of plants pose in burnished steel planters that redesign the square usable space.

The secondary entrance of the station are characterized by transparent inclined covers, which protect the stairs from atmospheric agents. The square and adjacent streets are fully paved to melt and form a single urban area.
