Cost: 200.000 €

Phase: Built

Team: SdARCH Trivelli&Associati

The project theme is fun and educational at the same time, where entertainment will play a key role in the diversification of the spaces.

The core idea is to create as many issues related squares, each one with a differently recreational function: the square, the multipurpose auditorium and amphitheater, the forest and the fairy village.

Among the characteristic features of the project we designed a wide connection area between the school and park. In succession, then we found the area dedicated to the bowling under a high white poplars, games for children and a platform that can be used by different age groups: for theater performances, concerts or a dance floor.

A huge bear will stand as a symbol of the park, built by assembling mattresses and rolls of coconut fiber.
